

# AccuVein AV400 Vein Illumination

The AccuVein AV400 is a vein illumination device that displays a map of the vasculature directly on the patient's skin. Locating veins can help with IV starts, blood draw, sclerotherapy, general and cosmetic surgery.

AccuVein can help in cosmetic injectable procedures to:

- Personalize treatment to patient's anatomy
- Locate and avoid veins to minimize bruising
- Improve patient satisfaction

**“Seldom does a technological advancement change the way medicine is practiced. In my case, being an Aesthetic Physician injecting hundreds of patients a week, bruising is an unwelcome and dreaded reality. AccuVein has reduced the incidence of bruising to almost zero.”**

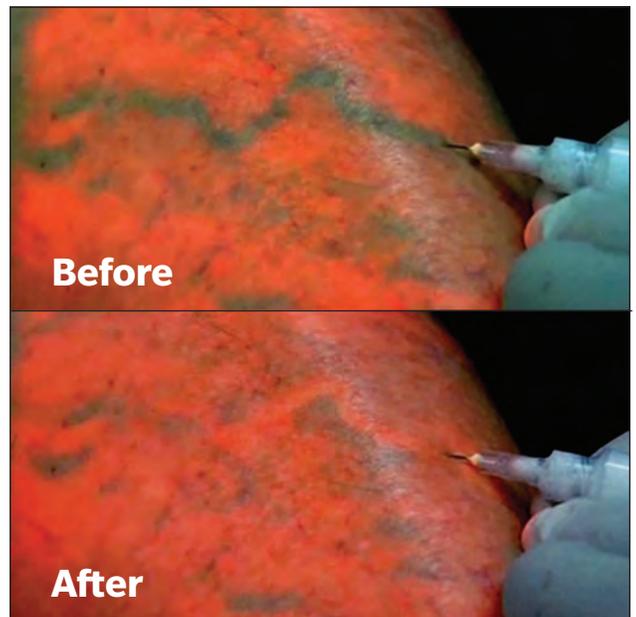

- William H. E. Romero, MD

AccuVein can help in vascular procedures to:

- Locate feeder veins
- Show foam sclerosant in real time
- Highlight veins in transdermal laser therapy
- Visually confirm efficacy of procedure
- Show veins to patients

**“This product changed the way I practice Phlebology. And improved all my sclerotherapy results.”**

—Dr. Rodrigo Kikuchi, MD, Vascular Surgeon

## The Leader in Vein Illumination

AccuVein is the global leader in vein illumination with thousands of facilities around the world using AccuVein's award winning, portable vein illumination. Only AccuVein has "Rapid Replacement," a world class support program with the guarantee of an overnighted replacement device to ensure that your clinicians always have access to vein illumination. Train your staff to use the AV400 quickly and easily by accessing our online learning center with training videos.

## An Essential Tool

Whether you are performing blood draws, IV starts or any number of surgical procedures, the AccuVein AV400 can help you locate veins so they can either be accessed or avoided. Imagine how much more effective you would be with a map of the vasculature highlighted on the surface of the skin. More effective procedures with less patient discomfort result in higher patient satisfaction, making it clear why so many facilities have chosen to incorporate AccuVein into their standard of care.

## AV400 Features

- **Easy to use.** No calibration or adjustment necessary, ready for immediate use. Device can be held in any direction, and works at four or more inches from the skin's surface.
- **Small size.** The AV400 fits in your hand and weighs less than 10 ounces.
- **Rechargeable battery.** No need to remove the battery or plug it into an electrical outlet during use. Simply place the device in the cradle for charging between uses.
- **Viewing modes.** In addition to the standard viewing option, the AV400 has an inverse mode which can enhance the visibility of small veins.
- **Accuracy.** Permanently aligned; center line accurate to less than the width of a human hair.
- **Patient types.** AccuVein's vein illumination will work on a broad range of patients; including neonates, dark skinned, and obese patients.
- **Hands-free options.** Assess the veins with this lightweight handheld device, then slip it into the "quick cup" of a hands-free accessory freeing up your hands to perform the procedure while viewing the vasculature.
